Eight different rock samples will be passed to you during this quiz. Indicate the type of rock each sample is by circling the correct term. In the space provided, list the characteristic you observed that enabled you to identify the rock. Finally, describe the process that produced the identifying characteristic (2 points for ID, 2 points for identifying characteristic, 2 points for process). You'll earn two extra credit points for each rock you properly identify by name (16/16 possible).
